

TRANSPORT EQUIPMENT

PRICELIST **EDITION 10.3**

1300 159 809

www.tegral.com.au

OUR GOAL:

EVERY LOAD DELIVERED UNDAMAGED

INTERESTING FACTS ABOUT TEGRAL

TEGRAL operates a full manufacturing facility with CNC Machines, Welders, Lathes and Injection Moulders up to 450t capacity.

We have our own design and rapid prototyping facilities in house which enables us to support the transport industry.

Loads easier

CUSTOM BRANDED LOAD ANGLES

1. Reduce equipment loss.
2. Increases brand awareness and traceability.
3. Available on both 470mm and 1050mm angles.

ALL DIMENSIONS ARE IN MM

Fast turnaround: 2-3 days

No extra charge on future orders.

MOQ on custom logo: 250

DELIVERY TERMS

YOUR LOADING OBLIGATIONS

RULES ON LOAD RESTRAINT

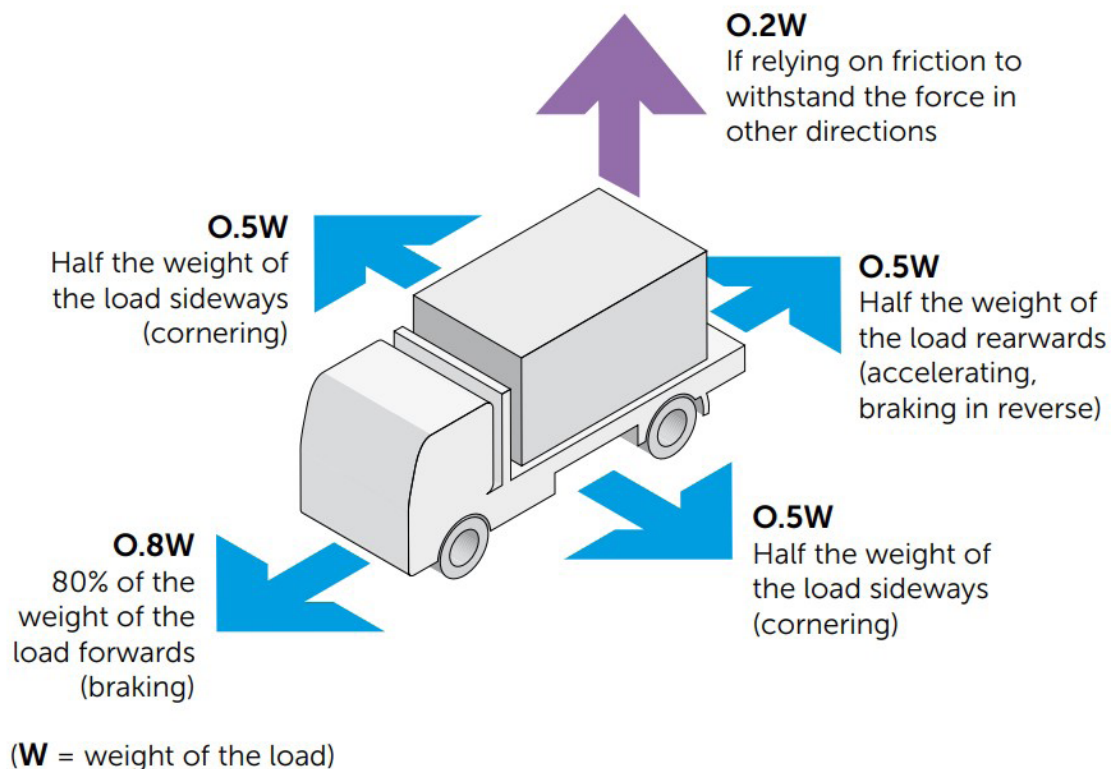

You are legally responsible for restraining your load so that:

- It does not come off your vehicle under normal driving conditions, including heavy braking and minor collisions. If it comes off, this is evidence you have breached the law.
- It does not negatively affect the stability of the vehicle, which can cause the vehicle to roll over or swerve uncontrollably, and cause an accident.
- It does not stick out of the vehicle in a way that could injure people, damage property or obstruct others' paths.

You must pick up any fallen load if it is safe to do so, or arrange for someone to retrieve it.

THE LAW SETS OUT PERFORMANCE STANDARDS FOR LOAD RESTRAINT

- The Performance Standards set out the minimum amount of force a restraint system must be able to withstand in each direction. For heavy vehicles, these forces are:

- If a load is restrained to meet these Performance Standards it will not fall off or affect the stability of the vehicle under expected driving conditions. This includes emergency braking and minor collisions.

LOAD RESTRAINT SYSTEM CHECKLIST

PLANNING THE LOAD

1. Understand your load.

Know your load's characteristics.

2. Choose a suitable vehicle for your load type and size.

Check your vehicle's carrying capacity and allowable overhang/height.

3. Use a restraint system that is suitable for your load.

Choose the most suitable restraint method for your load and vehicle.

4. Position your load to maintain vehicle stability, steering and braking.

Keep the centre of gravity as low as possible; don't exceed legal limits for overhang, height and width, mass and axle mass.

5. Check your vehicle structures and restraint equipment are in good working condition and strong enough to restrain your load.

Check all vehicle and restraint equipment is rated and fully functioning, and all worn/damaged equipment is repaired or replaced.

LOADING (AND UNLOADING) THE VEHICLE

6. Make sure your load is stabilised.

Take steps to stabilise a load that is at risk of toppling over.

7. Make sure you understand and use safe work practices when loading and unloading a vehicle.

Create plans, train staff, create loading zones and communicate appropriately for the environment.

8. Make sure you use enough restraint to keep you and others safe.

Your load restraint system must meet the Performance Standards.

DRIVING ACCORDING TO THE LOAD AND DRIVING CONDITIONS

9. Allow for changes in vehicle stability, steering and braking when driving a loaded vehicle.

Be aware of the changes in your vehicle's handling, height and width.

10. Check the load and its restraint regularly during your journey.

Loads can settle and shift; lashings may need to be re-tensioned.
